

Let's know how the concrete staircases are made in 6 easy steps:

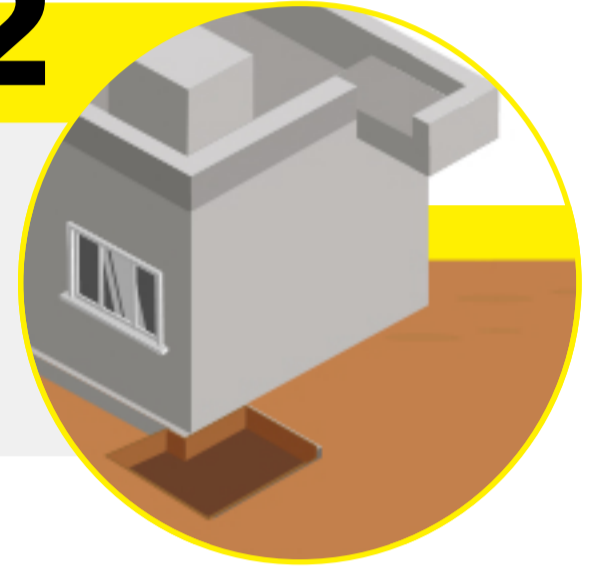

01

First of all, get the design of the staircase done by an engineer.

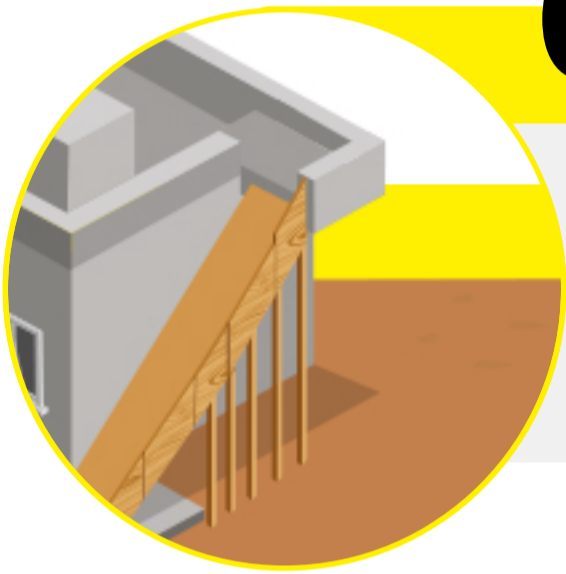

02

Then do the work of foundation.

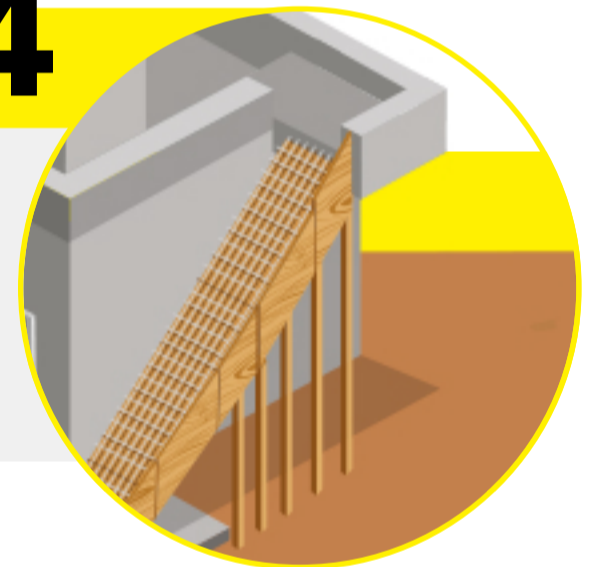

03

After that, do shuttering as per the design of your staircase.

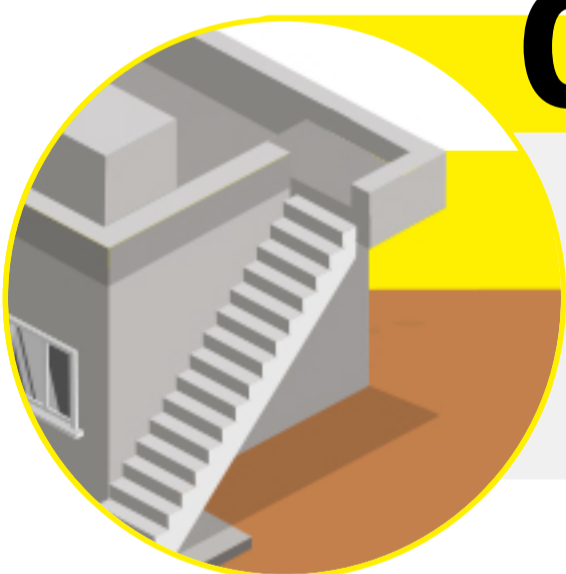

04

Then place the steel bars as per the drawing.

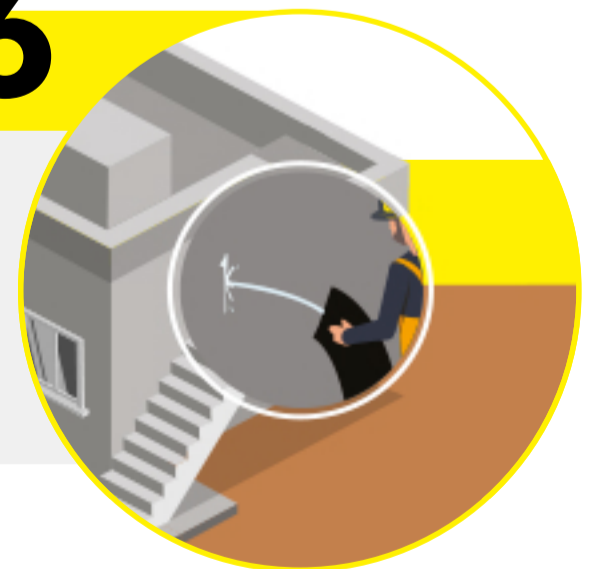

05

After that, do concreting of the structure. Take note that, the height of the every step should be the same.

06

Do the curing of the concrete properly. Lastly, do the finishing of the staircase.
