

# Given below are some of the kinds of making your home a green home:

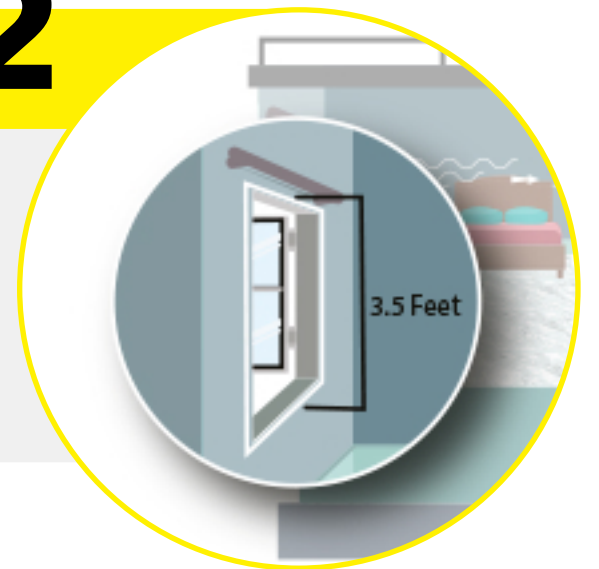

**01**

Use eco-friendly and locally available materials during the construction.

**02**

For good ventilation install the windows with a height of minimum 3.5 feet and it will be better if there is a cross ventilation in house.

**03**

To prevent the sunshine in the hot season, a rooftop garden can be made in the house, which can also be used for rainwater harvesting in the rainy season.

**04**

Go for rainwater harvesting to increase the sources of water. With the help of this, you can make good use of rainwater and establish an alternative source of water.
