

During the work, pay attention to these safety guidelines:

01

Discuss with your contractor about the safety of the workers; inform all of them regularly about the safety guidelines.

02

Permit only healthy people to work on your site and do not allow any outsiders to enter your site.

03

It is necessary to do thermal check of the people present on the site everyday. After reaching the site, the work should be started only after sanitizing hands and wash hands after every two hours.

04

Take note that, every person present on the site should wear helmet, gloves and mask.

05

Emphasize on following rules of social distancing at the site and do not indulge in handshakes. Always try to keep distance of 6 feet.

06

Fix one particular place for eating and it is necessary to follow social distancing while eating food. There should be an arrangement for clean drinking water at the site.

07

By prohibiting chewing of gutkha, tobacco and paan and spitting at the site, the dirt and diseases will not spread.

08

If someone shows the symptoms of cough, cold and flue, do not allow them to work and tell them to get the check up done by the doctor.

09

Must provide hospital and emergency service numbers on your site.
