FREEFLOW PLUS

Why should intricate designs come at the cost of durability and be so expensive?

Intricate design gives a unique identity and enhances the premium on our project. But conventional materials are either too expensive or too fragile to stand the test of time. Regular concrete cannot flow freely & self compact, leading to honey combing and inconsistent strength in intricate designs.

These limitations force us to compromise on design elements to meet the structural strength parameters.

Introducing

UltraTech FREEFLOW PLUS

An amazing, free flowing, self compacting concrete that gives wings to your imagination.

UltraTech FreeFlow Plus has advanced super-plasticizers that allow it to flow freely into every nook and corner and self compact. It enables you to build intricate yet strong structures with certainty & confidence that too at a fraction of the time and cost of conventional materials like marble and granite. Creating projects and a reputation that is distinct & durable is now possible with **UltraTech FreeFlow Plus**.

Why settle for the ordinary, when you can build the extraordinary!

UltraTech

FREEFLOW PLUS

Advantages:

- Free-flowing and self-compacting
- Easier placement of concrete
- No vibrator required
- Superior surface finish
- Denser micro-structure of concrete
- Faster construction
- Fewer labour required

Technical Specifications:

- Slump flow - 550 to 750 mm
- Filling ability by V funnel - 8 to 20 sec

Application Areas:

- Foundations, retaining walls, columns, slabs, complex structures, especially where steel congestion is very high
